

Synchronization Module

Infrared Emitter

Tester Unit

Technical Data

E3S has designed a kit to make cinema exhibitor's work easier.

This kit includes one synchronization module (left), one, two or three IR emitters (middle) and a tester unit equipped with a rechargeable battery (right).

Special mounts for the IR emitters as well as all required cables are included.

One IR emitter is enough for a cinema hall with up to 300 seats. For bigger halls or halls with specific architectures (balcony, etc.), extra emitters maybe required.

Enter the following parameters on the projector's interface :

Polarity	Negative
Delay	- 1200 μ s
Darktime	1000 μ s
